Introduction

The purpose of this document is to provide a guide on how to download, install and use the Validator Pre-Requisites Checker Tool.

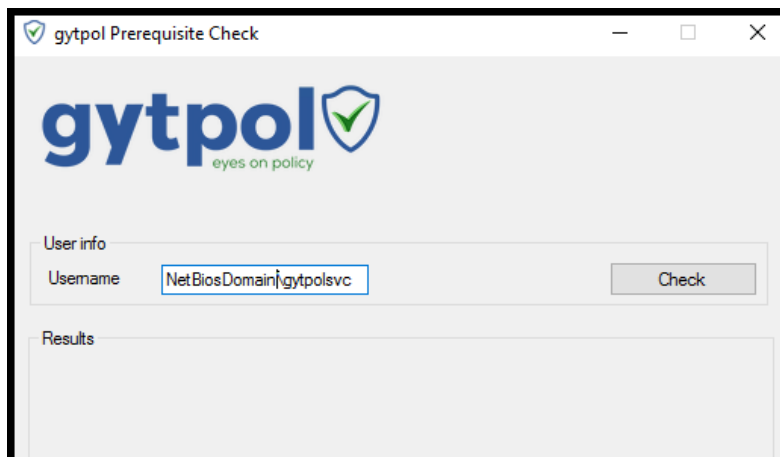

Pre-Requisites Checker

1. Download the tool from:
<https://gytpolartifact.blob.core.windows.net/gytpolartifact/release/installer-prerequisite/latest/GytpolPrereq.exe?sp=r&st=2020-11-30T22:17:10Z&se=2022-11-01T06:17:10Z&spr=https&sv=2019-12-12&sr=b&sig=FBQ5oMiQ6ByqxDeM9IRT3EuFTtLaP6TYT65EvvOuPic%3D>
2. Copy the file to gytpol server
3. Open Server Manager on gytpol server and tap → “Add Roles and Features” and click next until you get the Features tab:
4. Check the “Group Policy Management”, “Active Directory module for PS” and “AD DS Tools”:

5. Click Next and Install and wait until it ends
6. Right click on the gytpol tool you downloaded on step 1 → Run as administrator
7. Enter the gytpol user including the netbios domain, i.e. Domain\gytpolUser and press "Check":

8. Wait to see the results:

- a. Red X sign () – it means you need to fix it. Mouse over the question mark to see what you need to do to fix it
- b. Defender sign () – means the check is passed and the result is OK
- c. Question mark – it was unable to check the specific check
- d. Warning sign () – the check failed but it is not critical to fix it in order to continue to installation

9. Please restart the server before the installation
