

GYTPOL

THINK LIKE A HACKER

A Zero Trust framework which eliminates risks before they become a real threat

IMPROVE YOUR CYBER HYGENIE & MAXIMIZE YOUR SECURITY POSTURE

Continuous Monitoring

Endpoint Validation

Auto Remediation

Cloud Hybrid Migration

Regulation & Compliance

Lateral Movement Detection

CONFIGURATION CYBER RESILIENCE ■

Endpoints are the major **entry point** for hackers. EDR is not enough to protect your endpoints from breaches and related cyber risks of today.

40% of successful cyber attacks start with breaches due to endpoint **misconfigurations**.

Hackers then use LATERAL MOVEMENT as a major ATTACK VECTOR to attack critical assets such as the Active Directory & Cloud.

GYTPOL finally gives you **VISIBILITY**. Continuous **MONITORING & AUTO-REMIEDIATION** of misconfigurations on all your endpoints and servers. Be compliant ALL THE TIME.

THE GYTPOL BENEFITS ■

ELIMINATE AD BLINDSPOTS

24/7 monitoring of all your endpoints and servers.

Auto Remediation.

Group Policy / Intune Validation across network assets.

Remote Workforce visibility and risk analysis.

Next Generation Active Directory & AAD Assessment.

Cloud / Hybrid Cloud Migration.

Regulation & Compliance.

Breach & Lateral Movement Detection.

SINGLE POINT OF VISIBILITY & CONTROL

One console provides central visibility & SIEM supported.

Let's you know what is really happening.

Even for remote endpoints which are not connected to the network.
